

## Automated Uninstallation of Oracle Client Version 9.2

**You do not have to uninstall older versions of Oracle.** If version 9.2.0.1.0 isn't needed for other purposes and you want to clean it off the machine, you can run this process. If you have a different version of Oracle installed, or if it was initially setup differently, you may need to refer to the document "Manual\_Uninstall\_Oracle92.pdf".

Log on to the computer as a member of the Administrators group.

Run [\\tss-softstore\Software\Oracle\10\Installer\Remove\\_Oracle\\_9.2.0.1.bat](file://tss-softstore/Software/Oracle/10/Installer/Remove_Oracle_9.2.0.1.bat).

The uninstallation will begin and take a few moments. No input is usually necessary.

There is no dialog box indicating when the uninstallation is completed. You can watch the Processes tab in the Windows Task Manager to see when javaw.exe goes away. Also, after the uninstallation is done, you should no longer see an Oracle folder under the Windows Start > All Programs menu.
