Big

collective-awareness bots
three seek strongest signals (ie bases) and then transmit powerful RF frequency for 4th bot to map

stereo vision

beacons

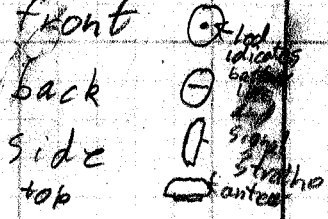

beacon

ir/RF com system

Many of these
front antenna
side IR
top place on all desks and any where you think signal strength will differ they communicate and triangulate their position

button sensors

much same as last distribute to employees they walk around it stores data & communicates its position and status when it can

same as last but looks like a pen

watch like the other ones
