

**Technical Services Veterinary:** Trans Ova Genetics is seeking a passionate, Doctor of Veterinary Medicine to join our growing, dynamic team working with the most advanced reproductive technologies in bovine production. This position would be based out of our center in breath-taking Belgrade, MT.

We would prefer that this individual have a minimum of five (5) years of in-vivo embryo production services experience. Alternatively, extensive experience in proven bovine palpation skills with a strong desire to achieve excellence in embryo transfer work would be acceptable. Knowledge of the bovine industry (beef/dairy) and bovine reproduction, nutrition and health in general is highly desired. Excellent communication skills (verbal/written) are required with internal team members and clients. A high degree of professionalism at all times is a must. Core embryo transfer services are still our foundation along with *in-vitro* fertilization, sexed semen applications, genetic preservation and cloning to multiply the success of beef and dairy clients. A chance of a lifetime to live and work in Big Sky country!

Applications accepted until June 1<sup>st</sup>. 2008. Please send your cover letter and resume to:
